Mission #1
CS 1400 - Hilton

Build a Java program that prints out the following information:

My name is [Your Name].
My favorite movie is [Your Favorite Movie].

So if I were doing it, my output would look like this:

My name is Spencer Hilton.
My favorite movie is Warrior.

As you name your files, please name them with the assignment "Mission01" and then your last name with a .java extension (unless otherwise indicated). So if it were me, I would submit the file as "Mission01Hilton.java".

Attach the .java file and submit the program through Canvas.

NOTE: Proper indentation, commenting, Java programming conventions, and general readability are an important part of programming that can set apart a good programmer from an excellent programmer. Part of your score on each assignment (approximately 10%) will be based on those readability elements.
